

St Ambrose Primary Mathematics Challenge 2017

On Thursday 6th July, four children from Year 5 visited St Ambrose College to take part in their Primary Mathematics Challenge.

Firstly, they completed a Maths Relay round, racing against the clock to solve number puzzles and earn pieces to construct a square. Next, they tested their brains in the Problem Zone, working on logic and real-life problems individually and as part of the team.

After some lunch and well-deserved fresh air, the team were ready to take on the afternoon's challenges. There was much rushing around in the Treasure Hunt, with the team coming joint first in their group for this challenge. Finally, some fiendish shape puzzles were waiting to be figured out in the Kinaesthetic Room.

All of the group said how much fun they had and worked together really well to come 7th of the 26 schools taking part. They were fantastic ambassadors for our school – well done, Flying Numerals!
